Dealer Programme — Testing Report

GoKesari Authorized Dealer & Merchant Acquisition Programme · 28 Oct 2026 · branch `staging`

Summary

- All eight build steps are done and on `staging` (latest dealer commit `f588580`).
- **Automated tests:** 86 of 86 dealer-programme tests pass. With the approval, document, onboarding-wizard, seller-verification and split checks run beside them, 209 of 209 pass.
- **CI on GitHub:** the full suite passes on the one-database and the two-database layouts, up to `c89cf0b`. Runs for the later commits were still queued when this report was written.
- **Staging (test.gokesari.com):** first pass 45 cases — 21 passed, 1 failed (fixed), 23 blocked on sign-ins. Second pass with all test accounts signed in: 20 more passed, plus instant approval, commission and the rating once the check ran. One real fault (D-2) — after a gateway payment nothing re-ran the approval check — is fixed in code. See §3.
- **Production:** released 28 Oct in two releases — #268 (ea7eecb) and release 2 (`8d6ef40`, merged 17:57 UTC; post-deploy check 5/5 healthy). All four feature flags are **off** there.

---

1. What was tested

Step	Module(s)	Automated tests	Result
1	Feature flags, geo areas, DEALER role, fee slabs	10	Pass
2	Dealer registration, documents, codes / link / QR, employees, legacy distributors	14	Pass
3	Attribution, leads, dealer-assisted registration, duplicates, `?ref=`, Employee ID	14	Pass
4	Instant approval on GST/PAN + gateway fee, ready-for-upload e-mail	14	Pass
5	Commission rules, ledger, cap, payouts, reversals, rating and bonus	13	Pass
6	Dealer board, admin dealer overview, document requirements	3	Pass
7	Support services: charges, quote, wallet / online pay, tickets, cancel / refund	13	Pass
8	Coverage map and targets, performance score, activation and 30-day activity	5	Pass
	Total	**86**	**86 pass**

Each test file states the build-prompt scenarios it covers (for example step 7: scenarios 57–67). Tests run against real PostgreSQL. CI runs them on both database layouts: one database, and the seller / customer split.

Checked in the browser (local), desktop and 375 px phone width:

- Support services: live price (120 products = ₹1,766.46); a wallet shortfall message; a free request opening ticket TKT-000001; the admin charges page.
- Coverage map, performance score (matches a hand calculation, 72.9) and the activation tab.
- The dealer board's link to a shop's Support services page.

---

2. Changes made after review

Change	Commit
Instant approvals: "Pending" lists only shops still waiting (a shop approved by an admin without documents no longer shows there)	`6db91cd`
Owner decision: a shop approved without its documents holds the dealer's activation commission and rating credit until the documents are verified	`9e3e1b7`
Dealer board links each shop to its Support services page (build prompt §3.10)	`c9ea939`
Admin → Dealers: the "All" filter lists every dealer (staging defect D-1)	`f588580`

The other session's approval-flow changes (admin approval without documents, deferred follow-ups, document reminders) and the onboarding wizard step 1 were reviewed against the dealer programme. No conflict remains; the dealer tests pass together with theirs.

---

3. Staging pass — test.gokesari.com

Full table: STAGING_TEST_RESULTS_2026-10-28.md.

Area	Pass	Fail	Blocked
Setup (flags on)	1	0	0
Step 1	5	0	1
Step 2	3	1	4
Step 3	3	0	3
Step 4	1	0	1
Step 5	1	0	2
Step 6	1	0	2
Step 7	1	0	6
Step 8	3	0	1
Flags off	1	0	1
Phone width	1	0	2
Total	**21**	**1**	**23**

Passed on staging:

- The feature-flags page and its change log.
- Geo areas, and the Pune-only district limit.
- These admin pages load at desktop and phone width: commission, instant approvals, support services, claims, document requirements and all three analytics tabs.
- Area targets: set, rejected when invalid, removed.
- The `?ref=` link pre-fills the code and shows the Employee ID field.
- With the flags off, the dealer and support APIs answer "not available".

Defect D-1 (the "All" dealer filter showed no dealers): fixed in `f588580`.

Observations (not defects):

- At phone width the analytics tables scroll sideways inside their box; nothing hints that more columns are off to the side.
- The Google map on `/shop/register` did not load in headless Chrome. Check it in a normal browser.

Second pass (operator, shop-owner and customer accounts signed in; payments through the test site's sandbox gateway, no money):

- **Passed:** operator refused on flags, commission and targets; dealer application → approval → code `GKS-MH-PUN-EZJTJG`, link, QR; employee E01; lead; dealer-assisted registration with the owner's e-mailed code; attribution shown to the dealer; dealer board; rates and CSV statement.
- **Support services, shop side:** price for 120 products ₹1,766.46; free request → ticket; wallet shortfall 402 → test credit → paid → ticket; cancel → refunded to the wallet, ticket closed; online payment → paid, ticket. `/dealer` and `/shop/support-services` fit 375 px.
- **D-2 — fixed in code (`3bf5a33`):** after a gateway-paid registration fee, the approval check and dealer commission were on a 2-second timer that never ran on staging. They now run right after the capture commits, in the same request; tests prove it.
- **D-3 — closed, same cause as D-2:** the check runs only when a document's status changes, so the first re-triggers did nothing. With a real status change, the paid shop was approved instantly, the dealer earned ₹100 + ₹150, the shop counted for the rating, and the owner got the "ready for product upload" e-mail.
- **Waived fees (`d8fc985`):** the approval queue can now waive a shop's fee; a waived fee now counts as a zero base, so no percentage commission or bonus is paid on it.

Feature flags on staging: all four are on for Pune (`MH-PUN`) only, since 28 Oct 16:36 UTC.

---

4. Still to test on staging

What	Needs
D-2 fix on staging: a new shop paid through the sandbox gateway is approved without any other trigger	A fresh shop (another owner account) once `3bf5a33` is deployed
Commission approval and payout with a bank reference	An admin pass on the ₹250 now earned by the test dealer (no money moves)
Duplicate warning on staging	Covered by automated tests only

No real cards, UPI IDs or bank accounts were used. No money moved.

---

5. Release status

Environment	Code	Flags	Database
Local	All steps	Tests switch them per case	Migrations 0101–0111
Staging	All steps	All on, Pune only	0101–0111 applied (Test database run on `ea7eecb`)
Production	Released 28 Oct: #268 (ea7eecb) and release 2 (8d6ef40), post-deploy checks passed	All off (checked)	0098–0111 applied

Production release goes staging → main as one release, with a post-deploy check, in an owner-approved window. Staging also carries other work that would ship with it: the approval queue, the onboarding wizard step 1, registration-fee changes and the region-move documents. After release the flags stay off; switching them on (Pune first) is a separate owner decision.
